

ADVENTURE | 2024

Wherever life takes you

Dusty trails. Climbing twisty mountain passes. Long and distant carriageways. Or maybe just a short commute across town. Renowned for their spirit of adventure, versatility and durability, no matter how you like to spend your time, you'll find a Honda Adventure motorcycle to be the perfect partner.

True adventure never ends

This bike is built to go long and beyond, and every update makes it big-distance ready. The 19-inch front wheel delivers more front-end grip, alongside lower centre of gravity. Seat height is lower and adjustable, tool-free between 835-855mm and the seat itself has been redesigned, thicker with an 8% larger area, for the extended riding range that the 24.8L fuel tank makes possible. We've given the OHC liquid-cooled twin-cylinder engine 7% more torque, with much stronger performance off the bottom and through the middle of the rev-range. It's immediately noticeable with the first twist of throttle. And, thanks to higher compression ratio of 10.5:1, new valve timing and updated intake there's the same 75kW peak power and more in the mid-range. And the exhaust is new for improved performance and a richer, more muscular note as revs rise.

With 20mm shorter stroke, front and rear Showa Electronically Equipped Ride Adjustment (Showa-EERA) is now standard fit. Which means optimum damping, all the time. For a perfect base setting choose Mid. There's also Hard, for higher speeds, touring, or carrying a pillion and luggage, Soft for easy manoeuvrability and Off-Road for precise suspension reaction away from Tarmac. User allows total customisation (when stationary) and you can swap between modes – and adjust rear spring preload – while riding.

7-level Honda Selectable Torque Control (HSTC) – managed by IMU for smooth intervention – monitors rear wheel traction and gathers up drive on- or off-road. 3-level Wheelie Control gives just the front wheel lift you want, while cornering ABS inspires full braking confidence. Four default riding modes, URBAN, TOUR, GRAVEL and OFF-ROAD are set ready but you can go fully custom with 2 USER modes. There's also the comfort of 5-level height adjustable screen, heated grips, practicality of ACC and USB sockets and full connectivity to access your smartphone's navigation apps. You can also choose your Africa Twin Adventure Sports ES with newly updated six-speed DCT, which equals smooth, instant automatic shifting up and down – great for long distance riding.

- 6.5-INCH TFT TOUCH SCREEN
- CORNERING LIGHTS WITH DRL
- APPLE CARPLAY® AND ANDROID AUTO® CONNECTIVITY
- OPTIONAL SHOWA EERA™ SUSPENSION

Forged through toughness

It's all about the torque. Torque is what finds drive in the dirt and it's what brings the instant acceleration needed for safe overtaking, especially when two up and loaded. So, we've given the OHC liquid-cooled twin-cylinder engine 7% more, with much stronger performance off the bottom and through the middle of the rev-range. And, thanks to higher compression ratio, new valve timing and updated intake and exhaust there's no loss of power – 75kW at peak – with the precise response and feel of Throttle By Wire control.

Riding off-road is about finding the balance to push. Which is exactly what this chassis does. The formula is precise; a lightweight steel frame, CRF450R-inspired aluminium swingarm and bolt-on subframe provide the right rigidity and feedback for traction. Long travel Showa suspension – 230mm stroke front, 220mm rear – with updated settings absorbs rough terrain, and there's huge 250mm ground clearance to clear obstacles. For pinpoint setup the rear shock, operating through Pro-Link, is fully adjustable for compression and rebound damping. Adding roadgoing practicality a taller, wider screen adjusts through 5 positions for maximum forward visibility or maximum wind protection. And 21-inch front/18-inch rear rims now wear tubeless tyres, with a revised spoke design, for easy repairs.

The electronics are designed to make the ride more enjoyable and safer. No matter the route. 7-level Honda Selectable Torque Control – managed by IMU – monitors rear wheel traction and smoothly gathers up drive on- or off-road. 3-level wheelie control gives just the front wheel lift you want, while cornering ABS inspires full braking confidence. Four default riding modes, URBAN, TOUR, GRAVEL and OFF-ROAD are set ready but you can go fully custom, across all of the parameters, in USER mode.

There's also now an upgrade choice. The Africa Twin ES packs Showa Electronically Equipped Ride Adjustment (Showa-EERA) which means optimum damping settings, all the time. There are 4 default modes to choose from, plus custom options and you can swope between modes – and adjust rear spring preload – while riding. The Africa Twin ES also has heated grips and an ACC socket. And, whichever Africa Twin you choose, our newly updated Dual Clutch Transmission is a unique option.

Mountains are calling

An all-round legend of adventure touring is reborn. And we've designed the XL750 Transalp to be the perfect partner for your adventures – wherever they lead. It has a purposeful look and feel, with zero excess and built tough. So, whether dealing with the urban sprawl, covering big highway days, or navigating endless trails the slim proportions of the mid-section combine with sleek fairing aerodynamics to give freedom with wind protection.

This bike is built to go the distance and genuine comfort – for two – matters so it's good to be prepared. From dirt tracks to green lanes long-travel Showa suspension absorbs bumps, while the 21/18-inch front and rear wheel combination roll smoothly over rough terrain. An 850mm seat height and 209kg kerb weight make the Transalp easy to manage from walking pace upwards; the riding position is relaxed yet sits you upright, offering great visibility and natural comfort. Compact and highly functional, the fairing and screen feature aerodynamics carefully sculpted to increase stability and reduce wind noise and buffeting at speed.

Then there's the full-blooded performance. 67.5kW power and 77Nm torque are strong numbers, no doubt. But it's the way the 755cc, 8V parallel twin-cylinder engine delivers you'll really notice. Our patented air vortex intake technology amplifies and smooths low- and mid-range response, while the cylinders use high-specification Ni-SiC plating to reduce friction – and increase power – at high rpm. Four default riding modes – Sport, Standard, Rain and Gravel – make it easy for most riding conditions and alter the level of engine power and braking, Honda Selectable Torque Control (HSTC), Wheelie Control and level of ABS intervention. User mode allows your custom preference of each parameter (including rear ABS switch-off, off-road) and management is via 5-inch TFT screen. Honda Smartphone Voice Control system keeps you connected while you ride and full LED lighting features Emergency Stop Signal (ESS) technology to alert road users behind of sudden braking.

Plus make the Transalp just how you want to ride it with a selection of accessory packs ready to go: ADVENTURE, COMFORT, RALLY, URBAN and TOURING.

Infinite adventure

Our X-ADV made the first move. Broke the ground. Led the way. Combining the capabilities and performance of an adventure motorcycle, with the comfort, convenience and commuting ability of a large-capacity scooter, it's a two-wheeled SUV that defies convention. And, as a premium urban explorer, capable of going from city block to off-road trail (and back) in a heartbeat, the X-ADV turns the daily commute, and every single ride, into a unique experience.

A lightweight mainframe provides core strength with steering geometry that delivers handling confidence, wherever you ride. Sharp, dual LED headlights feature Daytime Running Light (DRL) technology that's highly visible to other road users, while tough bodywork heightens a rugged style the X-ADV has made its own. It also hides plenty of storage space and a USB Type-C charger. The seat is also contoured to generate easy ground reach. A full-colour TFT screen offers intuitive control. You can link to many smartphone functions, such as navigation, calls, messages and music, via the Honda Smartphone Voice Control System. So, whatever the adventure you're never out of touch.

It's really fun to ride, too. There's a thrilling charge around the rev-counter from the 745cc, parallel twin-cylinder engine to peak power of 43.1kW, matched by muscular 69Nm mid-range torque. Throttle By Wire (TBW) control and four default riding modes optimise performance to suit conditions and terrain. And the X-ADV is flexible – you have the option to fully customise engine output and character, as well as the Dual Clutch Transmission (DCT) shifting schedule, Honda Selectable Torque Control (HSTC) and ABS level.

We've made it easy to prepare the X-ADV for whatever you have in store, with tailored accessory packs: ADVENTURE, TRAVEL and STYLE good to go. 2024 has the X-ADV arrive in three new colour schemes.

- SMART KEY OPERATION
- 35KW A2 LICENCE OPTION

NC750X

Every day is fun day

Sharp, compact bodywork marks out the individuality of the NC750X. But it's also a very comfortable motorcycle, thanks to a natural riding position, low seat height and protective screen. And there's extra storage space, where the fuel tank would be (more than enough for a full-face helmet) which is one of the features that really separates the NC750X from a standard motorcycle. All lighting is premium LED.

There's a full 43kW peak power to enjoy, with 69Nm peak torque punching hard in the mid-range. For peace of mind Honda Selectable Torque Control (HSTC) delivers refined, 3-level management of rear tyre grip. Three pre-set riding modes – STANDARD, SPORT and RAIN – alter engine power and engine braking character (and HSTC intervention level) to suit conditions. Additionally, USER mode allows full customisation. There's a six-speed Dual Clutch Transmission (DCT) option while the manual six-speed gearbox is managed via a slipper clutch, which makes for a light lever action and manages the rear wheel under rapid downshifting and hard braking.

A low centre of gravity from the forward-inclined engine and lightweight frame design makes for easy handling and precise steering. The 41mm Showa Dual Bending Valve (SDBV) front forks provide supple bump absorption, large or small and the rear Pro-Link rear monoshock features spring preload adjustment. Powerful, smooth braking performance is delivered by a twin-piston caliper and 320mm wavy disc up front, matched to a rear single-piston caliper, 240mm disc and two-channel ABS.

New Experience

Go Short. Go long. Go where you choose. Effortlessly at home in the city but built for adventure, the rugged NX500 blends a tough off-road silhouette with modern off-road-inspired design. Long-travel suspension absorbs the urban rough and tumble just as it does gravel trails helped by new, lightweight wheels.

For enhanced comfort over a long day's ride the purposeful fairing and tall screen combine to direct airflow neatly over and around. Sharp graphics add a hint of competition style and the 17.5L fuel tank holds plenty of range. A powerful new headlight throws out strong beam penetration and wide light distribution either side – which means you see a lot more when cornering at night. And brand new 41mm Separate Function-Big Piston SFF-BP USD forks offer class leading suspension and are set for precise reaction and feel, with dual discs for powerful braking.

The A2-compliant twin-cylinder engine delivers strong torque off the bottom and through the middle of the rev-range, with 43Nm peak, for the responsive acceleration all riders enjoy. Honda Selectable Torque Control (HSTC) manages rear wheel traction in all conditions on the road, especially in the rain and on dirt or gravel it can be switched off completely, for maximum drive.

We've joined up the riding technology. Through a busy working week – or over a fun weekend trip – you want to stay in touch, navigate or listen to music without losing concentration on the road ahead. And now, with the NX500 and Honda Roadsync, you can. Brand new, simple-to-use lefthand switchgear (backlit for use at night) meshes seamlessly with the TFT screen and Honda Roadsync app so you can stay focussed – and fully connected – to your world. The adventure begins.

CRF
300L

Ready for road and trail

The dual purpose CRF300L, with its lightweight chassis and strong power and torque from its engine, is a brilliant off-road bike. And the qualities that make it so good off-road – slim proportions, peppy throttle response, agile steering and supple suspension – also make it brilliant around town. It draws DNA from the mighty CRF450R and CRF450RX competition bikes, so starts in a great place and, thanks to HRC and their racing programme, every aspect of its dual-sport performance is perfected.

There's 20.1kW peak power and 26.6Nm torque available from the liquid-cooled, DOHC 4V single-cylinder engine. Short gear ratios through to 5th give sharp acceleration while a tall 6th makes for easy cruising. For extra control an assist and slipper clutch eases upshifts and manages rear wheel 'hop' under rapid downshifts. Wet weight is just 142kg thanks to a lightweight frame and tapered aluminium swingarm. Ground clearance of 285mm makes bumping off kerbs (or over logs) so much easier.

To soak up hits the suspension is long travel. Up front the Showa 43mm USD forks feature 260mm travel, with spring rate and damping calibrated for both road and off-road riding, matched by 260mm travel for the Pro-Link Showa monoshock. Easy control off-road needs free movement; the 7.8L fuel tank is deliberately slim; alongside the carefully contoured seat it allows smooth weight transfer forward to elevate front tyre grip. Crisp, positive LCD instruments are easy to read. So, whether navigating rough city streets, or conquering new trails (or both in a day) the CRF300L is a motorcycle built to explore.

Adventure, everywhere

Made for the adventurous dual-sport rider, the CRF300 RALLY is a small capacity machine packing heavyweight credentials. With styling drawn directly from the competition-specification HRC CRF450 RALLY, it adds long-range ability and comfort to its off-road performance. The fuel tank holds 12.8L, with a 1.6L reserve. And, unlike most dirt bikes, the flat filler cap is hinged for clean, easy-fill convenience. Ensuring relaxed, natural control the handlebar position is pulled back and the footpegs set low and back, making room for gear changing in off-road boots. They also feature rubber inserts. Seat height is 885mm. Piercing, asymmetric dual LED headlights provide excellent forward visibility, while flexibly mounted indicators are also bright LED. For instant readability the LCD instruments use large black digits on a crisp white display.

Like the trail-ready CRF300L the CRF300 RALLY packs a healthy and responsive 26.6Nm peak torque and 20.1kW peak power from its single-cylinder engine, with the control of an assist/ slipper clutch. The Showa 43mm USD forks and rear shock provide excellent suspension reaction and for powerful braking on any surface, the two-piston front caliper works a floating, 296mm wavy disc. Off-road, there's an option to switch off ABS control of the rear brake.

The CRF300 RALLY is about the freedom delivered by a lightweight chassis, long-travel suspension and responsive engine. But it's also about independence; the long-range autonomy that a big fuel tank allows, added to the sense of go-anywhere potential stored away in this motorcycle's comprehensive abilities. It is engineered to serve up a real taste of adventure to riders that want an easy to manage machine, whether for the daily commute, weekend tour or global journeys.

Honda Technology

Honda has developed and applied many innovative technologies for its motorcycle range, designed to have the greatest possible benefit for you and the world around you.

ANTI-LOCK BRAKING SYSTEM

Reduces braking pressure by monitoring the wheel speed, preventing the wheels from locking up.

CORNERING ABS

For increased confidence on the way into a turn the IMU-controlled ABS manages braking force relative to lean angle, speed of deceleration and front and rear wheel slip ratio maintaining traction to the limit. The amount of ABS intervention is also dependent on the riding mode selected; lift of the rear wheel is also controlled under hard-stop situations.

CORNERING LIGHTS

Additional LED lights activated according to speed and lean angle to illuminate blind spots when cornering.

CRUISE CONTROL

Activated and controlled from the right-hand switchgear to ease long range highway travel.

DUAL CLUTCH TRANSMISSION

Combines the riding enjoyment of a manual transmission with the convenience of an automatic, delivering enhanced comfort and sporty performance.

ELECTRIC START

Instead of kickstarting the bike, electric start offers a simple more convenient way to start the engine.

ENGINE MODE SELECT BUTTON

Giving a choice of 3 riding modes; Mode 1 delivers standard ECU maps, Mode 2 provides smoother throttle control and Mode 3 returns a more aggressive power delivery.

G MODE

Triggered by a switch on the instrument panel, G Mode improves traction and machine control by reducing clutch slip during gear changes.

HONDA IGNITION SECURITY SYSTEM

Only allows the bike to be started by its original encoded keys to effectively protect against theft.

HONDA ROADSYNC

Bluetooth connectivity for easy management of navigation, calls, messages and music whilst riding. Available on Android™ and iOS™ devices.

HONDA SELECTABLE TORQUE CONTROL

If the Honda Selectable Torque Control (HSTC) system senses an imminent loss of rear wheel traction it reduces torque to allow the tyre to grip.

LED LIGHTS

Brighter and more energy efficient than traditional bulbs, with no time delay and a longer life.

PRO-LINK® REAR SUSPENSION

Monoshock rear suspension utilises a triangular linkage system to progressively increase damping force through range of rear swingarm movement.

PROGRAMMED FUEL INJECTION

Map-type computerised system maintains strong power and responsive performance in all conditions.

SHOWA DUAL BENDING VALVE

Showa Dual Bending Valve forks improve ride comfort and handling by delivering proportional rebound damping with firmer compression damping.

SHOWA ELECTRONICALLY EQUIPPED RIDE ADJUSTMENT

Optional SHOWA EERA™ manages damping force relative to mode selection; rear spring preload can also be electronically adjusted.

SHOWA USD FORK

Larger diameter tubes above and smaller tubes at the bottom increase surface area, providing more rigidity to deal with off road terrain.

SIX RIDING MODES

There are four default riding modes to choose from, designed for ultimate performance in most situations: TOUR, URBAN, GRAVEL and OFF-ROAD. Each modifies engine response and engine braking, DCT G switch and Cornering ABS to suit conditions. Two user modes also allow you to arrive at the perfect set-up to suit your own personal preferences. Selection of the riding modes is simple – via the top left of the touch screen.

SMART KEY

This innovative technology improves both convenience and security. As long as your key is in your pocket or bag, you can release the seat and start the engine with the press of a button.

TFT DISPLAY

Full colour TFT screen to control riding modes, along with other bike parameters. Displays key information such as Gear Position indicator and rev counter.

TFT TOUCH SCREEN DISPLAY

6.5-inch full colour touch-screen for control of riding modes, navigation, Bluetooth smartphone/audio connectivity and Apple CarPlay® and Android Auto®

WAVY DISCS

Providing better heat dissipation and improved braking performance.

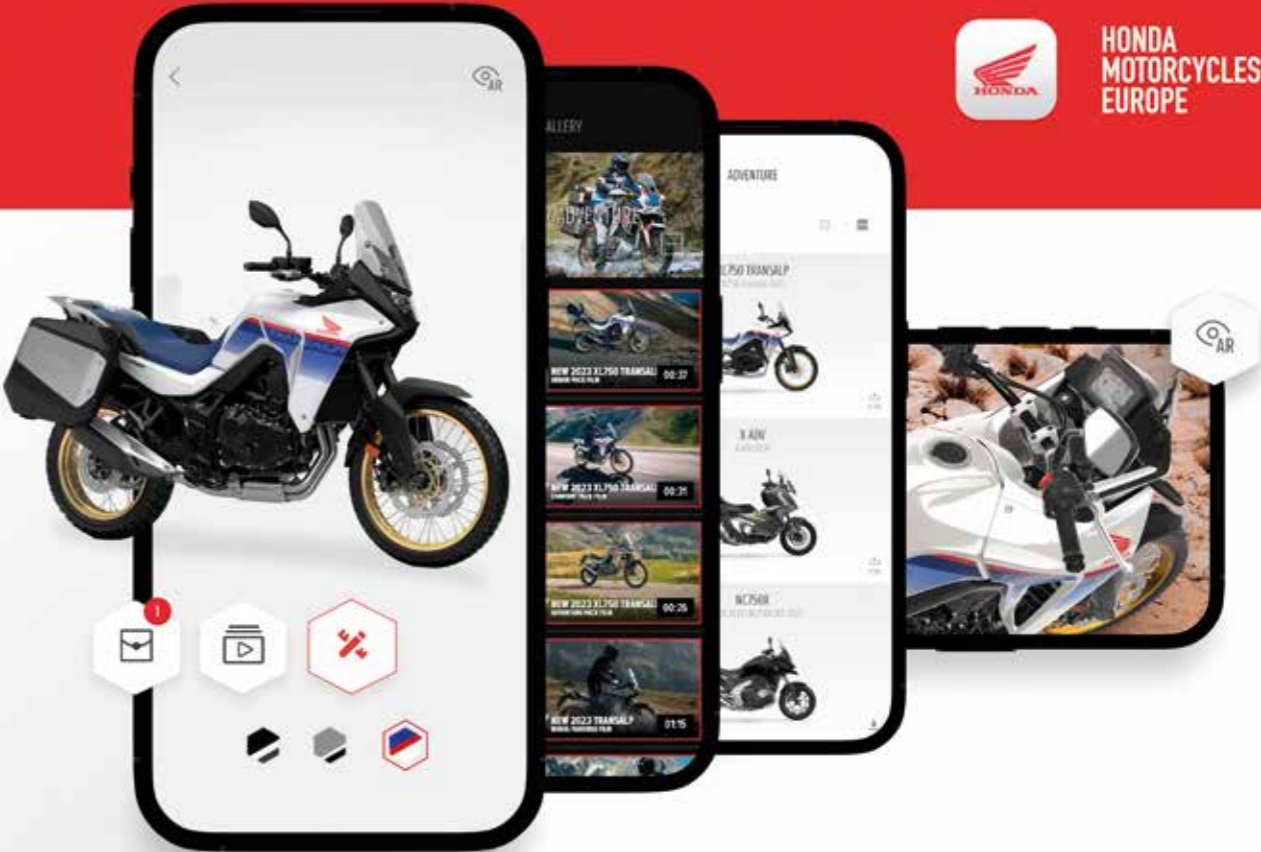

WHEELIE CONTROL

The IMU measures the pitch angle and, combined with front and rear wheel speed, manages the amount of height the front wheel gathers relative to the level of intervention selected. Level 1 is minimum Wheelie Control, level 2 medium and level 3 maximum. Wheelie Control can also be switched off completely.

The Power of Dreams

Enthusiast. Rider. Dreamer.

At Honda, we don't believe in taking the easy way out. Never settle. Never rest. That's what we believe.

It's a philosophy that means we never feel like we are done. It's why we never stop questioning the limits of every Motorcycle. Why we never stop striving for success, pushing innovation, engineering and development to the very limit. And then doing it again. And again.

It's why we're constantly pioneering engineering firsts – like the inline 4-stroke engine, dual-clutch transmission, or the motorcycle airbag. It's why we go beyond the existing, unafraid to challenge the status quo of the motorcycle market.

That's the restless spirit that drives us forwards and is passed on to every Honda rider, pushing them on to their next adventure. On to the joy of true freedom. On to the next big dream.

Because, after all, it's our dreams that move us.

The specific details of this brochure do not apply to any particular product supplied or offered for sale. Manufacturers reserve the right to vary specifications, including colours, with or without notice at such times in such manner as deemed appropriate. Major as well as minor changes may be involved. Every effort, however, is made to ensure the accuracy of the particulars contained in this brochure. Consult your Dealer for details regarding the specifications of any featured product. This publication shall not constitute – under any circumstances whatsoever – an offer by the Company to any individual. All sales are made by the Distributor or Dealer subject to and with the benefit of the standard Conditions of Sale and Warranty provided by the Distributor or Dealer, copies of which may be obtained upon request. While efforts are made to ensure specification accuracy, brochures are prepared and printed several months in advance of distribution and consequently cannot always immediately reflect either changes in specification or in some isolated cases the provision of a particular feature. Customers are always advised to discuss specific details with the supplying Dealer, especially if a selection is dependent upon one of the features advertised. Please contact your local dealer for information and specifications. Please note that the fuel consumption figures provided are results obtained by Honda under standardised testing conditions prescribed by WMTc. Tests are conducted on a rolling road using a standard version of the vehicle with only one rider and no additional optional equipment. Actual fuel consumption may vary depending on how you ride, how you maintain your vehicle, weather, road conditions, tyre pressure, installation of accessories, cargo, rider and passenger weight, and other factors. You accept that if you do go ahead and make a purchase or enter into any kind of transaction, whether for payment or not, you did so entirely in reliance on your own skill and judgement and not on that of anyone else.

RIDE WITH STYLE Read the owner's manual thoroughly. Get to know your machine and its capabilities. Concentration assists anticipation. Observe other road users' movements. Brake in plenty of time. Always wear a helmet and quality kit, ride fit and NEVER after drinking alcohol. Good roadcraft and courtesy identify the skilled and stylish rider. Honda endorse the law that all helmet visors must comply with BS 4110. Visors that transmit less than 50% of visible light cannot legally be used on the road.
